

Subtitle For The Third Video

Dewi : “ Good night everyone. Good night Azhari.

First, we want to say thank you so much to Azhari.

Thank you for joining this virtual meeting.

So, tonight we want to present our design result of Event Hits App.

We do the evaluation on three section.

Those are on the login or sign up form, home page that displayed the events,

And search page.

But before, let me turn on the share screen.

So, in the original design, on first page, the user will asked to enter the city.

And if we skipped it, the user will asked to enter the email.

After that, the user will be taken to the next page.

To the form login if the email is already registered,

or to sign up form if the email isn't already registered.

And we think, it will be more simple if from the beginning it clearly distinguished,

Between login form or sign up form.

That's for the first poin. And next will be continued by Savitri.”

Savitri: “so, the next poin is on the events page.

But honestly, we're not really sure about this,

Because in this pandemic situation there's no event.

But, If I looked in Google Playstore, on this page we have to pick a city first, to be able to see the event.

And we think, why on this page not made to display all events.

It can be categorized by time, such as nearest time, within this week or this month.

Because, in my opinion, this page in original design has the same function with search page.

And that's enough from me. Next will be Rahma.”

Rahma: “Next, about search page.

In the original design, there are three buttons that have the same function.

So, we think it will be nice if there was only one button for one function.

Then, when the search symbol is clicked,

the display will change to a page that all is red.

In fact, the user doesn't need that big space for just looking for an event.

That's all from me. Savitri want to add something maybe?.”

Savitri:”I want to add a little.

We also changed the color. But we don't change it all.

We don't lose the original color. It's red and blue.

We're just keep the color consistency.

On the top bar we changed it to all blue.

And for the buttons we changed it to all red.

Finally, that's all from us.

From the developer, have any feedback or want to give a suggestions?”

Kresna Azhari:” The idea for the search button is great.

This application is still in the development stage too.

So, there are still a few search buttons.

The color is still not consistent on page by page.

And on this design, for the front page is also good.

It's made separate between login and sign up form.

So in terms of UI it's also good, and the UX is also simple for users.

Good. It's really good.”

Dewi:” Maybe, that's it”

Savitri: "So, is our design acceptable?"

Kresna Azhari : "yes of course."

Dewi: "Maybe, that's it. Once again, thank you so much for helping us in this assignment"

Kresna Azhari : "It's okay. Keep up the good work for your study"
